tms

Time Management System

Time Management System (TMS) is a web-based port Productivity Measurement Application designed for Ocean Shipping Carriers and Agents. TMS includes the following features:

Port Activity Statement
Working Timesheet
Reports
Download
Partially Integrated with Dataloy
Web-based and Mobile

Port Activity Statement

A timeline of Working Shifts and Events from vessel arrival to departure. It provides a complete picture of vessel activity while at port from Port Hours and Productivity-To-Date to Detailed Working and Delay Hours as well as other information helpful in evaluating a port call.

Reports

Port Call Statement of Facts (SOF) and Gang Timesheet reports with up-to-date information are available online.

Download

All data from the Port Activity Statement and Gang Timesheets with commodity load/discharge and working and delay hours can be downloaded as excel files.

Working Timesheet

Allows users to record working and delay activities by time, load/discharge and commodity

- Activity types and descriptions can be customized specifically for carriers' needs.
- One Timesheet per gang and multiple Timesheets allowable for each Working Shift.
- Commodity Summaries can be recorded for each load/discharge for the productivity calculation of each gang.
- Gang Timesheets can be signed off online by Stevedore, Master/Chief Officer and Port Captain.

Web-based and Mobile

compatible with PCs, Notebooks, iPads and other Tablets. Easy to deploy for multiple ports.

Partially Integrated with Dataloy
